What's SCPI?

Standard Commands for Programmable Instruments

From the wikipedia's definition

The Standard Commands for Programmable Instruments (SCPI; often pronounced "skippy") defines a standard for syntax and commands to use in controlling programmable test and measurement devices, such as automatic test equipment and electronic test equipment.

Standard definition

- SCPI-99
- IEEE 488.2-2004

How it looks like:

*IDN?, SOURce:FREQuency:STARt?,

*RST,... SYSTem:COMMunicate:SERial:BAUD 2400

Tango Device Servers

What we (all) did with SCPI, or at least what I've seen:

- At least 49 Device Servers identified in the Catalogue
- Represents > 6% of the current Device Servers in the inventory
- 40 are written in Cpp, 8 in Python, 1 in Java

by Family	
Communications	8
Instrumentation	19
Measurement Instruments	20
Other Instruments	1
Standard Interfaces	1

State machine and tango description

Properties |

- Instrument
- Port
- Serial{Baudrate,Bytesize,...}
- Num{Channels, Functions, Multiple}
- MonitoredAttributes
- Auto{Standby,On,Start}

commands
• IDN()

- TxTerminator
- Off(), Standby(), On()
- Start(), Stop()
- {Add, Remove} Monitoring()
- {Get,Set}MonitoringPeriod()
- (IVD ()
- CMD()

attributes

- QueryWindow
- TimeStampsThreshold

How to define an attribute?

Attribute builder

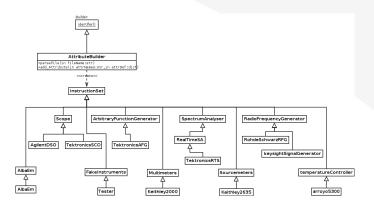

keywords

- type, dim
- label, description,
- format, unit,
- memorized
- min/max

- readCmd, writeCmd
- channels, functions, multiple
- delayAfterWrite
- readFormula

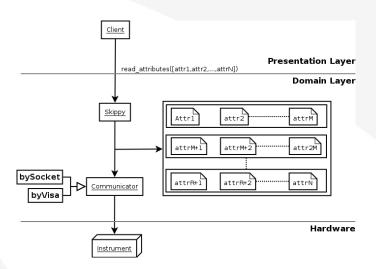

Instrument builder

Instrument requests

Sardana Controller

- Use a proxy in the controller
- Reduce layers: Instead of use a tango device, implement a native access to the instruments in the controller
 - Again, one specific controller per instrument?
- Reimplement generic features?
- Encapsulate and share the features: a python module

python-skippy module

```
>>> from skippylib import Skippy
              >>> skippyObj = Skippy(name='scodilt0401', port=5025, nChannels=4)
             >>> skippyObj.idn
          Builder
              'KEYSIGHT TECHNOLOGIES, DSOS204A, MY58150181,06.30.00701'
              >>> stateCh1 = skippyObj.attributes['StateCh1']
              >>> print("{!r}".format(StateCh1))
    communications
              StateCh1 (SkippyReadWriteAttribute):
                  rvalue: True
                  wwalne: None
                  timestamp: 1559207397.3
                  quality: ATTR_VALID
                  type: DevBoolean
                  dim: 0
                  readCmd: ': CHAN1: DISPlay?'
                  readFormula: None
                  writeCmd: ':%s%d:DISPlayu%s'
              >>> stateCh1.isRampeable()
Software patterns
              False
      Strategy
      Singleton c.
```

Composite in the attributes

In practice @ ALBA

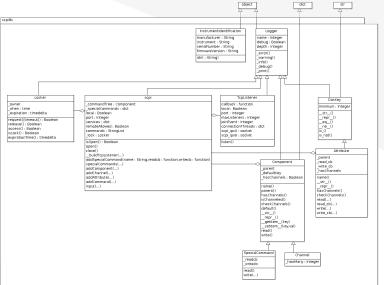

- Master oscillator
 - Radiofrequency generator
- Measured Filling Pattern:
 - Oscilloscope with the filling pattern
 - Many Oscilloscopes in the accelerator with we can cross different source signals
- Tune excitation:
 - Arbitrary Function Generator
 - Spectrum analyzer
- Beamline & Laboratory instruments
 - Source & Multimeters
 - Pump controller ¹
 - Temperature controller ²
- Alba #Em & Music SiPM
 - We close the circle with the scpilib

¹LN2 pump where J.Andreu has had to write the server side scpi in C#

²It doesn't work as scpi but string-like protocol

python-scpilib module

Wish & ToDo Lists

skippylib

- Improve new instrument insertion
- Improve the watchdog
- Dynamic attributes as property
- Dynamic commands
- Generalize *TxTerminator*
- Different ramp strategies
- WriteFormula
- Input validation
- Dependencies with state-like

scpilib

- autodoc scpi tree
- python3
- Set of *minimal* commands
- Write lock (current is RW)
- Report locker owner
- Extend *lock* feature to subtrees
- Listen more channels than network
- SSL and ACLs
- Event subscription

gui

• Generic taurus gui for any of the instruments

mensional data
